

Subcontractor Profile – Moncrief Construction Limited

Obish Construction – Segment PQ Line Clearing

Moncrief Construction Limited (MCL) is a general contractor specializing in powerline construction, heavy civil construction, and aggregate production. Based out of Kenora, MCL has been working throughout Northwestern Ontario for over 50 years and has grown to employ close to 100 year-round personnel with up to 200 seasonal workers.

Missabay – Right of Way Clearing on segment BC.

MCL and its longstanding partners have recognized the importance of strong relationships to the success of construction projects in Northern Ontario. The relationships go beyond the projects at hand and contribute to developing and fostering community skills and knowledge bases.

Missabay – Pickle Lake Station

Thanks to the Wataynikenayap Power Project, MCL has had the opportunity to form new relationships and partnerships. Our Indigenous partners for the Wataynikenayap Power Project include:

- Mishkeegogamang First Nation (Missabay Contracting LP)
- Lac Seul First Nation (Obish Construction LP)
- Kingfisher Lake First Nation (Kingfisher Lake Construction LP)
- TKG Group (TKG MCL LP)
- Wunnumin Lake First Nation (Wunnumin MCL JV)

MCL supports its partners by offering employment opportunities to community members beyond the scope of the Wataynikenayap Power Project and expanding to our wide variety of regional projects. We offer hands-on training and mentoring, allowing employees to expand their skillsets and learn from our experienced core group of individuals.

During 2020 and 2021 to date, MCL and its partners have been subcontracted by Valard to undertake substation civil works at the Pickle Lake and Pipestone sites, various sections of right-of-way clearing works (over 200 km), tower and anchor foundation installation (earth and rock), and access trail construction and maintenance. Our work for the Wayatnikenayap Power Project covers an expansive area, including line segments AB, BC, CJ, and PQ to date. Future work on the Wataynikenayap Power Project will include aggregate production, additional substation civil works, and continuing with clearing and foundation works.
